

## **DESCRIPTION OF THE MACHINE**

Semi automatic filling machine, with pneumatic working, suited to fill and dose volumetrically, dense, liquid and pasty products.

The machine is made with base structure made entirely of stainless steel AISI 304. All parts which are in direct contact with the product to be filled are made of stainless steel AISI 304. Joints and seals are made of teflon P.T.F.E. material.

This machine can fill any kind of product: interchangeability of the dosing nozzle enable to work with any kind of product at highest precision.

Product feed can be by means of an hopper or vacuum pipe connected with your stocking tank.

## **WORKING OPTIONALS**

- Hopper of bigger capacity that the standard one.
- Hopper complete with stirrer, interspace and thermostat to read the temperature.
- Dosing head including "mushroom" nozzle, suitable for pasty and for liquid products.
- Dosing head including "penetrating" dosing nozzle, suitable to fill foamy products.
- Automatic filling repeater, including panel selector.
